

Navigational Commands

WebDriver provides some basic Browser Navigation Commands that allows the browser to move backwards or forwards in the browser's history. We can access the navigation methods provided by WebDriver by typing `driver.navigate()`.

Commands	Description	Syntax	Accepts Parameter	Returns	
Navigate To:	This method Loads a new web page in the current browser window.	<code>driver.navigate().to("https://www.google.com");</code>	Accepts String as a parameter	Returns Nothing .	
Refresh Command:	This method does the same operation as clicking on the refresh Button of any browser.	<code>driver.navigate().refresh();</code>	Accepts Nothing as a parameter	Returns a Nothing .	
Back Command:	This command is used to return to the previous page in the browser's history.	<code>driver.navigate().back();</code>	Accepts Nothing as a parameter	Returns a Nothing .	
Forward Command	Move forward page using the Forward () command.	<code>driver.navigate().forward();</code>	Accepts nothing as a parameter	Returns a Nothing .
